TASK-5, a novel member of the tandem pore K+ channel family.";
PILUGERS Arch. 442:828-833(2001)
-:- FUNCTION: pH-dependent, voltage-insensitive, background potassium channel protein. Rectification direction results from potassium concentration is protessium on either side of the membrane. Acts as an ion concentration on either side of the membrane. Acts as an outward rectifier when external potassium concentration is low. When external potassium concentration is high, current is inward.
C-:- SUBCELIULAR LOCATION: Integral membrane protein (Potential).
C-:- TISSUE SPECIFICITY: Widespread expression in adult. Strongest captersion in pancreas and placenta. Lower expression in brain, lung, prostate, heart, kidney, uterus, small intestine and colon.
-!- MISCELLANEOUS: Inhibited by external acidification. Activated by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE=97459932; PubMed=9312005; DOI=10.1093/emboj/16.17.5464; Duprat F., Lesage F., Fink M., Reyes R., Heurteaux C., Lazdunski M.; "TASK, a human background K+ channel to sense external pH variations

N-linked (GlcNAc. .) (Potential).
H->N: Greatly reduces pH sensitivity.
halothane and isoflurane. SIMILARITY: Belongs to the two pore domain potassium channel (TC 1.A.1.8) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

"An open rectifier potassium channel with two pore domains in tandem cloned from rat cerebellum ";
J. Neurosci. 18:868-877(1998)
-! FUNCTION: PH-dependent, voltage-insensitive, background potassium channel protein. Rectification direction results from potassium ion concentration on either side of the membrane. Acts as an outward rectifier when external potassium concentration is low.
When external potassium concentration is high, current is inward
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Eukaryota; Merazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

Activated by protein kinase A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (By similarity).
SUBCELLULAR LOCATION: Integral membrane protein (Potential).
TISSUE SPECIFICITY: Strongest expression in heart. Moderate expression in lung and brain. Low levels in liver, kidney and skeletal muscle.
                                                                                                                                                                                                                                                                                       16-OCT-2001 (Rel. 40, Last sequence update)
05-JUL-2004 (Rel. 44, Last annotation update)
Potassium channel subfamily K member 3 (Acid sensitive potassium channel protein TASK-1) (THK-related acid-sensitive K+ channel 10 pore potassium channel TASK-1).
Name-Konk3; Synonyms=Task, Task1;
Rattus norvegicus (Rat).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cytoplasmic (Potential).

                                                                                                                                                                                                                                                                                                                                        SUBURIT: Honodimer (Potential).
SUBURIT: Honodimer (Potential).
TISSUB SPECIFICITY: Very strong expression in heart, also detected in kidney, brain, skin, testis, lung, skeletal muscle, small intestine and stomach. Not detected in liver, thymus or spleen.
MISCELLANEOUS: Inactivated by barium.
SIMILARITY: Belongs to the two pore domain potassium channel (TC 1.A.1.8) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MKRONVRTLALIVCTFTYLLVGAAVFDALESEPELIERQRLELRQQELRARYNLSQGGYE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MKRONVRTLALIVCTFTYLLVGAAVFDALESEPEMIERORLELROLELRALRARYNLSEGGYE

                                                                                                voltage-insensitive, background potassium
near physiological pH.";
EMBO 0. 16:5464-5471(1997).
-!- FUNCTION: pH-dependent, voltage-insensitive, background potassium
-!- channel protein. Rectification direction results from potassium
- ion concentration on either side of the membrane. Acts as an
- outward rectifier when external potassium concentration is low.

When external potassium concentration is high, current is inward
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       InterPro; IPR002801; Ion trans.

--- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
--- TISSUE SPECIFICITY: Mainly found in the cerebellum. Also found in adrenal gland, kidney and lung.
--- MISCELLANEOUS: Inhibited by phorbol 12-myristate 13-acetate (PMA).
Insensitive to changes in the pH range of 7-8.
--- SIMILARITY: Belongs to the two pore domain potassium channel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TISSUE-Cerebellum;

"TASK-3, a novel randem pore domain acid-sensitive K+ channel. An extracellular histidine as pH sensor.";
J. Blol. Chem. 275:16650-16657(2000).
-!- FUNCTION: pH-dependent, voltage-insensitive, background potassium channel protein.
-!- SIMILABLIY: Belongs to the two pore domain potassium channel
(TC 1.A.1.8) family.

                                              channel protein TASK-3) (Two pore potassium channel KT3.2) (Fragment). Name=KCnk9; Synonyms=Task3; Rattus norvegicus (Rat).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       auditory nervous system.";
Mol. Cell. Neurosci. 18:632-648(2001).
-!- FUNCTION: pH-dependent, voltage-insensitive, background potassium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           channel protein.

-!-SUBCELLULAR LOCATION: Integral membrane protein (Potential).
-!-TISSUE SPECIPICITY: Expressed in the CNS but not in heart, lung, liver, kidney, intestine and skeletal muscle. The highest expression was found in the olfactory nuclei, piriform cortex, cerebellum, antedorsal thalmic nucleus, pontine nucleus, dorsal raphe and several nuclei in the medulla. Shows a non-homogeneous distribution in the hippocampus. Expressed at highest levels in the lateral posterior and inferior portions and at medium levels
                                                                                                                                                  Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi, Mammalia, Eutheria, Rodentia, Sciurognathi, Muridae, Murinae, Rattus NCBI_TaxID=10116;

Mol. Cell. Neurosci. 18:632-648(2001).

-!- FUNCTION: Probable potassium channel subunit. No channel activity observed in heterologous systems. May need to associate with another protein to form a functional channel.
-!- SUBUNIT: Heterodimer (Potential).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Brain-specific. Highly expressed in auditory nuclei, in Purkinje cells and in olfactory bulb mitral cells.
-!- SIMILARITY: Belongs to the two pore domain potassium channel
(TC 1.A.1.8) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Rattus norvegicus (Rat).

```
The invention relates to human and mouse TREK-1 potassium channel proteins and their corresponding DNA molecules. TREK-1 nucleic acid is useful for transfecting cells to induce expression of the TREK-1 potassium channel protein. These cells are then used in assays to identify compounds which have anaesthetic properties, producing a safe, reversible state of unconsciousness with concurrent amnesia and analgesia in a mammal upon inhalation. The present sequence is murine TASK potassium channel protein related to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Murine; potassium channel protein; TREK-1; TASK; anaesthetic; analgesia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360
New nucleic acid encoding a non-inactivating outwardly rectifying potassium transport channel, designated TASK2, useful in the treatment of hypertension or dysfunctions of the kidney, liver or pancreas.
                                                                                                                                                                                                    The present sequence is that of human TASKI (TWIK-related acid-sensitive K+ channel), a member of a new family of 2P domain potassium channels, also including TWIK-1 (see AAY79673) and novel TASK2 (see AAY79675).

TASKI is expressed in many different tissues, and at particularly high levels in pancreas and placenta. Host cells expressing TWIK-1 family members can be used to screen for substances that modulate the activity of members of the TWIK-1 family of potassium channels. The drugs identified may be useful in the treatment of diseases of the heart or of the nervous system, such as epilepsy, arrhythmia, vascular diseases, neurodegenerative diseases, kidney, liver or pancreas diseases, hypertension, diseases associated with ischaemia or anoxia, endocrine diseases associated with ischaemia or anoxia, endocrine diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240

The invention relates to TWIK-6, TWIK-7, IC23927, TWIK-8, IC47611,

IC47615, HNMDA-1, TWIK-9, alpha-2delta-4, 54414 and 53763 ion channel
family (ICF) mucleic acids and proteins. The FWIK-6, TWIK-7, IC23927,

TWIK-8, IC47611, IC47615, HNMDA-1, TWIK-9, alpha-2delta-4, 54414 and
53763 ICF nucleic acids and proteins may be used for preventing,
catagnosing and treating ICF-related diseases. The sequences may be used
to treat disorders associated with decreased expression by rectifying
cutations or deletions in a patient's genome that affect the activity of
the proteins by expressing inactive proteins or to supplement the
complement own production of ICF proteins. The proteins and in
the production of ICF proteins. The proteins and in
catigens in the production of antibodies against ICF proteins and in
catigens in the production of antibodies against ICF proteins and in
catigens in the production of ICF proteins. The proteins may be used to
anti-ICF protein antibodies, agonists and antagonists may be used to
regulate ICF protein expression and activity. The antibodies may also be
consed as diagnose and treat a wide variety of disorders, e.g. cancers
cond leukaemia, Alzheimer's disease, Parkinson's disease, multiple
cond leukaemia, Alzheimer's disease, Parkinson's disease, multiple
cond leukaemia Alpha for this patent is also available in electronic

The invention relates to TWIK-6, TWIK-7, IC23927, TWIK-8, IC47611, IC47615, HNMDA-1, TWIK-9, alpha-2delta-4, 54414 and 53763 ion channel IC47615, HNMDA-1, TWIK-9, alpha-2delta-4, FWIK-7, IC23927, TWIK-8, IC47611, IC47615, HNMDA-1, TWIK-9, alpha-2delta-4, 54414 and 53763 ICF nucleic acids and proteins may be used for preventing. Contract disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of ICF proteins by expressing inactive proteins or to supplement the patients own production of ICF proteins. The proteins may also be used as anti-ICF protein antibodies, against ICF proteins and in anti-ICF protein antibodies, againsts may be used to regulate ICF protein expression and activity. The anti-ICF protein expression and activity. The regulate ICF protein expression and activity. The regulate ICF protein expression and activity. The antibodies may also be used to regulate ICF protein expression and activity. The antibodies may also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       used as diagnostic agents for detecting the presence of ICF proteins in samples (e.g. by immunoassay). The nucleic acids and proteins may be used to prevent, diagnose and treat a wide variety of disorders, e.g. cancers and leukaemia, Alzheimer, g disease, Parkinson's disease, multiple sclerosis, epilepsy, hepatic disorders and cardiovascular disorders. This sequence represents a human protein used in the scope of the invention. Note: The sequence data for this patent is also available in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TWIK-6, TWIK-7, IC23927, TWIK-8, IC47611, IC47615, HNMDA-1, TWIK-9, alpha2delta-4, 54414, or 53763 nucleic acids and proteins, useful for preventing, diagnosing and treating e.g. cancers, Alzheimer's disease and cardiovascular disorders.
Human; ion channel family; ICF; cancer; leukaemia; Alzheimer's disease; Parkinson's disease; multiple sclerosis; epilepsy; hepatic disorder; cardiovascular disorder; cytostatic; neuroprotective; nootropic; antiparkinsonian; hepatotropic; cardiovascular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Glucksmann MA, Silos-Santiago I;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to TWIK-6, TWIK-7, IC23927, TWIK-8, IC47611, IC47615, HNWDA-1, TWIK-9, alpha-2delta-4, 54414 and 53763 ion channel family (ICF) nucleic acids and proteins. The TWIK-6, TWIK-7, IC23927, TWIK-8, IC47611, IC47615, HNWDA-1, TWIK-9, plaha-2delta-4, 54414 and 53763 ICF nucleic acids and proteins may be used for preventing, 53763 ICF nucleic acids and proteins may be used for preventing, to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of ICF proteins by expressing inactive proteins or to supplement the patients own production of ICF proteins. The proteins may also be used as antigens in the production of antibodies against ICF proteins and in assays to identify modulators of ICF protein expression and activity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            anti-ICF protein antibodies, agonists and antagonists may be used to regulate ICF protein expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of ICF proteins in samples (e.g. by immunoassay). The nucleic acids and proteins may be used to prevent, diagnose and treat a wide variety of disorders, e.g. cancers and leukaemia, Alzheimer's disease, Parkinson's disease, multiple sequence represents a human protein used in the scope of the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                       TWIK-6, TWIK-7, IC23927, TWIK-8, IC47611, IC47615, HNMDA-1, TWIK-9, applaadelta-4, 5414, or 53763 nucleic acids and proteins, useful for preventing, diagnosing and treating e.g. cancers, Alzheimer's disease and cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 ELERVVLRLKPHKAGVQWRFAGSFYFAITVITTIGYGHAAPSTDGGKVFCMFYALLGIPL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 300

samples (e.g. by immunoassay). The nucleic acids and proteins may be used to prevent, diagnose and treat a wide variety of disorders, e.g. cancers and leukaemia, Alzheimer's disease, Parkinson's disease, multiple sclerosis, epilepsy, hepatic disorders and cardiovascular disorders. This sequence represents a rat protein used in the scope of the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at seqdata.uspto.gov/sequence.html.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ,
                                                                                                                                                                                                                                                                                                                                 The present sequence is that of murine TASK (TWIK-related acid-sensitive K+ channel), a member of a new family of 2P domain potassium channels, also including human TWIK-1 (see AAY19671), human TASKI (see AAY79674) and novel human TASKI (see AAY79675). Human and mouse TASK proteins share 85% identity, indicating that they are products of orthologue genes. Host cells expressing TWIK-1 family members can be used to screen for substances that modulate the activity of members of the TWIK-1 family of potassium channels. The drugs identified may be useful in the treatment of diseases of the heart or of the nervous system, such as epilepsy, arrhythmia, vascular diseases, neurodegenerative diseases, kidney, liver or pancreas diseases, hypertension, diseases associated with ischaemia or secretion, and muscle diseases
                                                                                                                                                                                                                                             potassium transport channel, designated TASK2, useful in the treatment of hypertension or dysfunctions of the kidney, liver or pancreas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120

The invention relates to a mutant potassium ion channel protein, having four membrane spanning domains and two pore forming domains, comprising a mutation at the second pore forming domain. The expression of the mutant protein in a cell confers improved inward potassium flux and the ability to grow in the presence of potassium. Mutant proteins and their corresponding polynucleotide sequences can therefore be used to improve inward potassium flux into cells under acidic conditions by modularing the membrane potential using therapeutic agents. The sequences may be used to develop agonists and antagonists of potassium channel proteins in order to control pests such as nematodes and insects. This sequence

                            Polypeptides and polynucleotides of the potassium channel family, useful for identifying agonists/antagonists of therapeutic use and diagnosis and treatment of cancer, pulmonary, cardiovascular, inflammatory and renal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is encoded by an expressed sequence tag (EST) which is related to a cDNA encoding a human DKCNI polypeptide. The polypeptide is a member of the potassium channel family. The DKCNI polypeptides and polynucleotides are useful for treating diseases including cancer, pulmonary, cardiovascular, inflammatory or renal diseases, pain, psychiatric disorders including depression and schizophrenia, migraine, elseperse including Alzheimer's, neurological disorders, migraine, epilepsy, sleep-related disorders, erectile dysfunction and alopecia. DKCNI polynucleotides are useful as diagnostic reagents for detecting mutations in the associated gene
                                                                                                                                                                                                                                                                                                                                                                                                            Human; DKCN1; potassium channel; cancer; pulmonary disease; depression;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MKRQNVRTLSLIVCTFTYLLVGAAVFDALESDHEMREBEKLKABEIRIKGKYNISSEDYR

KCNB is expressed in breast tissue. The KCNB polypeptides are useful for identifying a compound that modulates its activity. The KCNB polypeptide and nucleic acid are useful for detecting cancer cells in biological samples. The inhibitor of the potassium channel polypeptide is useful for inhibiting proliferation of a cancer cell and for treating a potassium channel-associated disorder. The KCNB nucleic acids, proteins, and/or antibodies are useful in the diagnosis or prognosis, or treatment

                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human transporters and ion channels (TRICH) and the polynuclectides encoding them. The composition comprising TRICH or agonist of TRICH is useful for treating a disease or condition associated with decreased expression of functional TRICH or condition associated with overexpression of TRICH respectively. The composition comprising Above a useful for diagnosing a condition of disease associated with expression of TRICH in a subject, where the disorders include a transport disorder such as akinesia, cystic fibrosis, diabetes mellitus, cardiacon's disease, myasthenia gravis, cardiac disorders associated with transport e.g. Alzheimer's disease, Wilson's disease, consistent of a sandia, hypertension, myocarditis, neurological disorders associated with transport e.g. Alzheimer's disease, Wilson's disease, contizophrenia, cataracts, infertility, hyperglycaemia, Grave's disease, dementia, multiple contire, addison's disease, Huntington's disease, dementia, multiple contire, addison's disease, Huntington's disease, dementia, multiple contire, addison's disease, Huntington's disease, dementia, multiple content entering a transcript image of a tissue or cell type, which represents the global pattern of gene expression by a particular tissue or cell type and for analysing the proteome of a tissue or cell type.

The global pattern of gene expression by a particular tissue or cell type and for analysing the proteome of a tissue or cell type.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ŝ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to human tandem of P domains in a weak inward rectifying potassium channel polypeptides (TWIK-9) termed 56115 and nucleic acid molecules encoding such polypeptides. Sequences of the invention are useful for treating TWIK-9-associated or related disorders invention are useful for treating TWIK-9-associated or related disorders such as central nervous system disorders (e.g. Alzheimer's disease, autonomic function disorders (e.g. parkinson's disease), autonomic function disorders (e.g. phpolar affective disorders, neuropsychiatric disorders (e.g. depression, schizophrenia), learning or memory disorders (e.g. amnesia), cipipolar affective disorders, cardiac-related disorders (e.g. arteriosclerosis, myocardial infarction), pain disorders (e.g. cancer) and disorders of tissues in which TWIK-9 protein is predominantly expressed. They are also useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing, forensic biology), predictive medicine (e.g., diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomics) and in methods of treatment (e.g. therapeutic and prophylactic). TWIK-9 polymucleotides are used in gene therapy. The present sequence is human TWIK-9 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

TWIK-8, IC47611, IC47615, HNWDA-1, TWIK-9, alpha-2delta-4, 54414 and 53763 ICF nucleic acids and proteins may be used for preventing, adagnosing and treating ICF-related diseases. The sequences may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of ICF proteins by expressing inactive proteins or to supplement the production of ICF proteins. The proteins may also be used as antigens in the production of antibodies against ICF proteins and in antigens in the production of antibodies against ICF proteins and in anti-protein antibodies, against ICF protein and activity. The anti-protein antibodies against ICF protein antibodies may be used to regulate ICF protein expression and activity. The antibodies may be used to regulate ICF protein expression and activity. The antibodies may be used to prevent, diagnose and treat a wide variety of disorders, e.g. cancers and leukaemia, Alzheimer's disease, Parkinson's disease, multiple scherosis, epilepsy, hepatic disorders and cardiovascular disorders. The sequence tepresents the human TWIK-9 protein of the invention. Note: The sequence data for this parent is also available in electronic format from USPTO at seqdata.uspto.gov/sequence.html.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A/Accession: JC7703
C/Comment: This protein, a new member of the tandem-pore K+ channel family with four tr
C/Comment: This protein, but does not produce a functional plasma membrane K+ current by itse
C/Genetics:
A/Gene: task-5
A/Amap position: 20q12
C/CYMORAIN: transmembrane protein
F/107-128/Domain: transmembrane segment #status predicted <TMS1>
F/107-128/Domain: hydrophobic cytoplasmic linker #status predicted
F/156-180/Domain: transmembrane segment #status predicted <TMS3>
F/156-180/Domain: transmembrane segment #status predicted <TMS3>
F/156-180/Domain: transmembrane segment #status predicted <TMS3>
